

Index for The Computer Journal, Volume 28

1. Index of Titles of Papers, etc.

- Achieving hash table searches in one or two bucket probes 313
- Algorithm for optimal procedural nesting 17
- Algorithm for the even distribution of entities in one dimension 530
- Analysis and optimisation of data currency and consistency in replicated distributed databases 518
- Analysis of an improved symmetric binary B-tree algorithm 417
- Approximation algorithm for secondary index selection in relational database physical design 398
- Architecture of a generalised distributed database system - PRECI 282
- Arca: a local network file server 243
- Centrenet - a high performance local area network 213
- Comment on complexity analyses of event set algorithms 496
- Complexity control in logic-based programming 487
- Computability of stack non-underflow 257
- Computer architecture for solving consistent labelling problems 105
- Concurrent machines 449
- Construction of variable-length comma-free codes 379
- Criteria for assessing an information theory 200
- DAP-Algol: a development system for parallel algorithms 148
- DAP FORTRAN subroutine for the eigensolution of real symmetric matrices (algorithms supplement) 340
- Data dictionary for learning data analysis 270
- Database instances, abstract data types and database specification 154
- Defining system requirements to meet business needs: a case study example 97
- Description of a program for nonlinear programming: the centroid program 89
- Design and implementation of a relational DBMS for microcomputers 391
- Design for a data model based on abstraction of symbols 298
- Dialogue development system for the design and implementation of user interfaces in Ada 22
- Efficient context switching 375
- Efficient new way to represent multi-dimensional data 184
- Entropy approach to solving some network reliability problems 353
- Enumerating ordered trees lexicographically 538
- Error propagation and recovery in concurrent environments 466
- Estimating disc access patterns using diffusion models 409
- Expected performance of traversal algorithms in binary trees 426
- Exploiting vector computers by replication 138
- Feature analysis of contemporary information systems methodologies 223
- FEDOS: a finite element database for offshore structures 498
- Further study of a stack-length model 9
- Generation of permutations in direct lexicographic ordering by arithmetic methods (algorithms supplement) 444
- Hardware pattern matching algorithm in a dataflow 264
- History of macro processors in programming language extensibility 29
- Hybrid data structures defined by indirection 44
- Informal approach to formal (algebraic) specifications 59
- Information, human activity and the nature of relevant theories 206
- Information: mystical fluid or a subject for scientific enquiry? 195
- Information, the life blood of organisation 203
- Introduction to the formal specification of relational query languages 162
- Is an information theory enough? 211
- Labelling and implicit routing in networks 5
- Language enhancement facility for COBOL - its design and implementation 128
- Lessons learned from LCF: a survey of natural deduction proofs 474
- Linear algorithm for colouring planar graphs with five colours 78
- Macro processors for enhancing high-level languages - some design principles 34

- Mapping from a conceptual schema to a target internal schema 508
- Mathematical models of file growth 179
- Method of generating surfaces as a composite of cyclide patches 433
- Multiple generation text files using overlapping tree structures 414

Note on Broyden's mark scaling algorithm (short note) 111

- Pad structures for the Rainbow Workstation 68
- Parallelism in simple algebra systems 142
- Performance analysis of a single-file version of linear hashing 319
- Performance of a relational interface to a codasyl database 501
- PMS level notation for the description and simulation of digital systems 357
- Practical perfect hashing 54
- Programming Denotational Semantics II 480

- Rank order distributions and secondary key indexing 309
- Re-examination of four classificatory fusion strategies 439
- Relational schema description and manipulation facility 170
- Restructuring Pascal programs containing goto statements 134
- RSA key calculation in ADA (algorithms supplement) 343

- Sampling without replacement in linear time 412
- Selection of a reduced set of indexes 406
- Simple method of data correction 372
- Simplifying screen specification - the 'Full Screen Manager' interface and 'screen form' generating routines 117
- Software for reading, refereeing and browsing in the BLEND system 1
- Some elemental operations on linear quadrees for geographic information systems 73
- Sorting a random access file in situ (corres.) 95
- Spiral storage: efficient dynamic hashing with constant performance 330
- Structuring two-level grammar specifications 250
- Surface fitting by triangulation 335
- Survey of algorithms for contiguity-constrained clustering and related problems 82

- Tattoo on a micro-computer 216
- Towards a theory of information 195
- Towards the optimal secondary index organisation and secondary index selection 524
- Towers of Hanoi problem (corres.) 350, 543, 544
- Tuple placement technique for databases 291

- Using semantic concepts to characterise various knowledge representation formalisms: a method of facilitating the interface of knowledge base system components 112

Weighted decision tables - an alternative solution for ambiguity 366

3. Index of Topics, etc.

- Abstract Database System (ADS) 298
Abstracted conceptual schema (ACS) 508, 510
ACM/PCM (Active and Passive Component Modelling) 223
Action stub weights 370
Ada 22, 343
AI programming language 375
Algebra systems, parallelism in 142
Algol-68 148, 480, 484
Algol-68S 480
Algorithms
 alternation tree 314
 clustering 82
 colouring planar graphs 78
 eigensolution of real symmetric matrices 340
 even distribution of entities in one dimension 350
 event set 496
 generation of permutations in direct lexicographic ordering by
 arithmetic methods 444
 hardware pattern matching 264
 mapping NIAM to ACS 512
 mark scaling 111

- optimal procedural nesting 17
- parallel 148
- restructuring Pascal programs 136
- RSA key calculation in Ada 343
- Schkolnick 406
- secondary index selection 398
- statement of policy 349
- surface fitting by triangulation 335
- symmetric binary B-tree 417
- threaded and unthreaded binary trees 426
- Alternation tree, algorithm 314
- Arca local network file server 243
 - atomic updates 247
 - communication with 246
 - file system structure 245
 - garbage collection 247
- Arithmetic stack behaviour 9
- Arithmetic stack behaviour model 257
- Array processor implementation 108
- ASTRID program generator 501
- Asynchronous automata 463
- Asynchronous deterministic device 452
- Asynchronous discrete devices 450
- Atomic operations 468
- Automata
 - asynchronous 463
 - from ADD functions 463
- AUTOMATH project 474
- Automation, design objectives 205
- Backward error recovery 466
